Under the authority of the *Pest Control Products Act*, Health Canada's Pest Management Regulatory Agency (PMRA) has approved the addition of new uses on glyphosate tolerant canola to the product label of Touchdown Total Herbicide, containing technical grade glyphosate present as the potassium salt. The specific uses approved in Canada are detailed on the label of Touchdown Total Herbicide, *Pest Control Products Act* Registration Number 28072.

A corresponding MRL was proposed in the consultation document published on 16 May 2012, Proposed Maximum Residue Limit PMRL2012-15, *Glyphosate*. The PMRA received no comments impacting the proposed MRL in response to this consultation.

To comply with Canada's international trade obligations, consultation on the proposed MRL was also conducted internationally by notifying the World Trade Organization, as coordinated by the Standards Council of Canada. No comments were received as a result of the World Trade Organization consultation impacting the proposed MRLs.

The following MRL for glyphosate takes legal effect in Canada as of the publication date of this document and replaces an MRL and residue definition previously established for glyphosate.

Established Maximum Residue Limit for Glyphosate

Common Name	Residue Definition[a]	MRL (ppm)	Food Commodity
Glyphosate	*N*-(phosphonomethyl)glycine, including the metabolites aminomethylphosphonic acid, *N*-[(acetylamino)methyl]phosphonic acid and *N*-acetyl-*N*-(phosphonomethyl)glycine	20	Rapeseeds (canola)[a]

ppm = parts per million

[a] Replaces both the previously established 10 ppm MRL and the residue definition, which included glyphosate and a single metabolite aminomethylphosphonic acid.

A list of pesticide MRLs established in Canada, as of the date indicated, can be found on the Maximum Residue Limits for Pesticides webpage in the Pesticides and Pest Management section of Health Canada's website.
